

Semi-finished product range  
Cast and moulded parts  
Elastomer spring elements  
Snow plow blades  
Clutch packages  
Protective jaws  
PUR metal compounds  
Concrete-wear parts  
**Wheels, rollers and mills**

## Wheel- and castor recycling

**Do you just throw your wheel rims away with the tires when the profile is worn down?**

**Surely not...**

Unfortunately that still occurs all too often with wheels and castors with solid rubber-, Vulkollan®- or polyurethane linings.

Since the coating of wheels, castors and bandages is one of the main focal points of our production, here in particular we want to set an example for modern environmental awareness.

We have set ourselves this challenge insofar, that in the field of wheel- and castor coating we offer recycling in the form of recoating of the main body.

If the relevant wheel- or castor bodies are still in good condition, first we remove the worn old coating, prepare the metal parts accordingly by means of sandblasting, degreasing and a coating of adhesive primer, and finally recoat them. After a possible renewal of bearing elements, a practically new wearing part is produced.

Describe to us your particular application-technical requirement or send us your detailed inquiry. Put us to the test.

We assure you even now of a prompt and reliable processing.

For inquiries please contact our sales team.
